### ABSTRACT

This article presents problems related to the definition of philosophical terms in an explanatory dictionary and their analysis, and discusses the issue of their lexicographic improvement.

### KEYWORDS

Term, philosophy, pometa, dictionary, explanation, order, principle, lexicography, article, example.

### INTRODUCTION

The process of globalization, which is raging all over the world, does not remain without its influence on a particular society, its language and lexicon. Including the strong relations of Uzbekistan with the countries of the whole world, the great reforms and changes

carried out in all spheres of our society are manifested in the Uzbek language, especially in its lexicon.

### MAIN OF THE RESULTS

As a result of such changes, the cause of serious changes in the vocabulary of the Uzbek language the

work of compiling a multi-volume Explanatory Dictionary of the Uzbek language has become one of the most important works in linguistics. G. Leibniz is more convenient to arrange in alphabetical order so that words can be “used by citizens” about the order of placement in the dictionary, for “philosophical intelligence” (owners) it is better to place them “in meaning”. [1] explanatory dictionaries show examples of modern literary norms of the use of words, be an instruction that contributes to the correct understanding of the essence of works written in the national language, reflect the general condition of the lexicon of the modern literary language, the lexicon of the modern literary language should fully and adequately represent its semantic system. [2] in the Explanatory Dictionary of the Uzbek language, special attention is paid to the evolutionary disclosure of the system of meanings of multi-meaning words, the role of application and scope of use of each meaning, the coverage of meanings, meaning ottenkas and their various functions in the lexicographic plan. [3]

The work of creating a dictionary in general is considered a rather complicated process and requires its own responsibility. To date, explanatory dictionaries have been created twice, which indicate a large volume of vocabulary of the Uzbek language, the norms of the literary language of the language, the state of application of the Uzbek language. The “Explanatory Dictionary of the Uzbek language”, created in 1981,

was published for the first time in the history of Uzbek linguistics and consists of two roofs. Unlike it, the 5-volume Explanatory Dictionary of the Uzbek language, which is published quite complete and edited, also serves as an invaluable resource for a wide audience of users on the Uzbek language. These dictionaries are a valuable material not only for language users, but also for the field of linguistics. Because the creation of such a large lexicographic resource in Uzbek vocabulary was a kind of breakthrough in dictionary science. After the independence of our state, great attention began to be paid to the field of lexicography, and as a result, it created the need to compile an excellent multi-volume Explanatory Dictionary. As a result, in 2008, a 5-volume Explanatory Dictionary of the Uzbek language was created.

In connection with the immeasurable development of industry, agriculture, science, technology and culture in Uzbekistan, new economic reforms in our country and the development of market Relations, a lot of new words and terms have appeared in the vocabulary of the Uzbek language. The meaning of many words has changed, expanded, the meaning of some words has become more clear, differentiated among themselves. Almost all of this is expressed in a five-volume dictionary. The direct connection of language with the life of society, first of all, finds its expression in its lexical system. Any scientific and technological progress in society is regularly reflected in the lexical

system of the language, in particular, in its terminology. Terms-scientific and technical process, specialized units that reflect knowledge related to various fields of science. In the field of Science and technology, terms occupy a special place in the naming and statement of scientific concepts, no branch of science can be imagined without Terms.

In World linguistics, terminology has developed rapidly as a blood drop of each branch of science. The period shows that terminographic research is of great importance in the systemic formation of the terminosystem. Explanatory dictionaries indicating the terminological systems of a particular language, as well as the general wealth of the language, are considered the largest applied research in this regard for any linguistics.

- Significant achievements in Uzbek linguistics have been achieved in this matter. But given the fact that the language evolves in a way related to social life, the improvement of the work of creating dictionaries, the enrichment and updating of the vocabulary base remain relevant. Already “” each of us should consider the focus on the state language as a focus on independence, respect and loyalty to the state language, respect and devotion to the native land, making such a view a rule of our lives ” [4] as the main source of acquisition of sectoral knowledge increases the need for research on terminology.

A separate study of philosophical terms as a study aimed at the direct implementation of the decrees” on measures to radically increase the prestige and position of the Uzbek language as a state language“, PF-6084 of October 20, 2020”on measures to further develop the Uzbek language and improve the language policy in our country " and other regulatory legal acts related to

Today, from about 60 branches and branches of Science, a statistical analysis was carried out on terms and terminological meanings, which were selected and included in the Explanatory Dictionary in relation to 21 areas considered the most basic[5].

When analyzing the existing philosophical terms in the Explanatory Dictionary of the Uzbek language, it turned out that there are also many controversial, controversial situations. For example, the fact that many philosophical terms, such as abad, absolutism, absolutism, abstract, cited in the Book Of Fire, are terms, is not expressed through special pomets. Also fls in the grass. Through the Pometasi, words are given the term meaning of philosophy, i.e. fls. Through the Pometasi, we can observe that even when giving the philosophical term meaning of a word, there is no certain order, or, although it does not exist, it is not followed. For example, “analogy [yun. analogia-compatibility, nausea, similarity] 1 fls. Similarity of a feature in things and phenomena.

2 mnt. It is a form of inference in which a conclusion is made about two things, their similarities and other aspects based on the similarity in some aspect between the phenomenon.

3 huq. To apply to this action the legal norm, which provides for a similar action (phenomenon) without a specific action being reflected in the law.

4 tlsh. The fact that language units acquire similarity, uniformity in a task or other aspect in the interaction of some kind of relationship. E. g. look, look, look at the independent and auxiliary verb of non-object verbs to be blind object verb to be direct, spiritual: read blind-read Look-read." [6]

"Some [wool. basic] 1 iqt. Basis, basis. q. base 1,2.

2 fls. iqt. The totality of production relations that occur at a certain historical stage of the development of society. The basis is the economic system at a certain stage of the development of society. From the newspaper.

3 geod. astr. It is the main line that can be measured directly from a certain place on the Earth's surface, making it very accurate. The intersection of a straight line connecting two points where the body is observed is called the base. "Astronomy". [3] baqo, in the primary word philosophical terminology as the second meaning, in the third place in the words of conflict and content, in the word materialism fls. Giving first place

with, s.t. if the term is given in second place, then in the primary word s.t. pometasi bilian first fls. Given in second place with Pometasi, besides mnt. And if the fls gives their pomets together in a single sense, then in some places they are given separately.

The relevance and novelty of the study is determined by the need to determine the semantic features of the philosophical term of the period under study, which provides a scientific basis for the linguistic description of the philosophical terminological system of its philosophical text. Despite the significant achievements of modern terminology, in the linguistic study of the philosophical term as a whole and the philosophical term of the period described in particular, there are many unresolved and even unpopular problems for discussion: philosophical terms in general and the terms of philosophy of the period under study are characterized by the presence of a number of distinctive features.

The complexity of the semantic structure of meaning in some cases determines the presence of several general identifiers: this phenomenon is especially characteristic of terms that are the main part of the terminological system of a particular author. The question of the semantic ambiguity of the philosophical term is removed within the framework of a certain system of philosophical terms: the term may be ambiguous as part of the "large" system of terms of philosophy, but this term refers to a certain

philosophical current and philosophical term. the system of a particular thinker determines its relative uncertainty, which is unambiguous within the framework of the term system.

The correlation of terms with the worldview of a particular thinker makes it possible to talk about the author's philosophical term systems, the study and lexicographic description of which constitute an important function of modern terminology. The author's terminological systems formed on the basis of theories created by the authors include, for example, terminological systems: the most characteristic for the philosophy of the beginning of the 20th century is the revision of philosophical terms, which performs a special discursive function in the text of a particular philosopher, which means a new "quantum" of philosophical knowledge. In this, philosophers give their subjective definition of the term and use this linguistic sign in a purely individual sense. The information obtained serves as a scientific and methodological basis for further analysis of the specifics of the author's philosophical terminology systems, as well as for the development of the principles of lexicographic description of the author's philosophical terminology.

## CONCLUSION

The study of the terminology of all areas in general as a holistic research work serves to serve the

development of the language as well as the in-depth study of that area, the improvement of its education.
