Abstract: This article explores the teaching profession as more than just the delivery of knowledge, emphasizing its educational, moral, and social dimensions. It highlights key aspects of pedagogical mastery, including the application of knowledge to real life, didactic strategies, use of innovative technologies, and individualized approaches to students. The teacher's ethical and social responsibilities — patriotism, fairness, honesty, and serving as a role model — are also discussed. The article underscores modern educational priorities and the essential role of teachers in societal development.

Keywords: Teacher, pedagogical skills, education, upbringing, moral duty, innovative technologies, didactic approach, individual approach, spirituality, professional responsibility.

Introduction: The teaching profession includes not only the art of imparting knowledge, but also the task of influencing the human heart, transmitting vital values to the future generation. Each lesson of the teacher is a combination of knowledge, spiritual education and spiritual wealth. From this point of view, the pedagogical skills and duties of the teacher reflect not only his scientific approach, but also his human qualities.

Pedagogical skills: applying knowledge to life

Pedagogical skills depend on how effectively a teacher applies science-based knowledge to students' lives. Several key aspects stand out in this process:

Reading and mastery of basic knowledge: A teacher must have in-depth knowledge of his subject. He must know the secrets of science and current news and convey the most accurate and reliable information to students.

Didactic approach: To easily convey knowledge, the teacher uses various didactic methods and techniques.

These methods should arouse students' interest and encourage them to actively study. For example, interactive lessons, group discussions, and methods of demonstrating international experiences enliven the learning process.

Use of innovative technologies: In modern educational conditions, the use of technological resources increases the quality of the lesson. Multimedia tools, digital platforms, and interactive presentations open subjects to students from a new perspective.

Individual approach: It is important to educate each student according to his/her unique characteristics, abilities and needs. The teacher is required to identify the individual potential of the student and choose the appropriate approach for him/her.

The duty of the teacher and social: moral responsibility.

The duty of the teacher is a moral obligation in the field of education and enlightenment. It shows the teacher not only as a teacher, but also calls on him/her to be an

example in many aspects of life:

Patriotism and respect for culture: The teacher must instill national values, upbringing and culture in students through his/her lessons. He/she must form respect for the customs, traditions and history of the people.

Justice and honesty: One of the main duties of the teacher is to treat all students equally during the lesson, expand their opportunities and value the opinion of each. In this way, he/she strengthens the principles of social justice and equality.

Being an example: A teacher creates spiritual and moral examples for students with his life. His words, values, and actions affect the future personality and worldview of students.

Responsibility: A teacher, feeling his professional and moral responsibility in every lesson and in everyday life, contributes to the development of students as intelligent and spiritual people.

Pedagogical priority in modern educational conditions.

Today, the educational process is changing rapidly. Digital technologies, new teaching methods, and global education systems encourage teachers to constantly update themselves. At the same time, the pedagogical skills and duty of a teacher also depend on the ability to adapt to changes, which is remembered at every step. The use of innovative approaches and intellectual resources enlivens each lesson of the teacher, increasing independent thinking and creativity in students.

CONCLUSION

The pedagogical skills and duty of a teacher include not only scientific knowledge, but also life values, culture and personal qualities. Each teacher, through his professional skills and moral duty, makes an invaluable contribution to the social, spiritual and intellectual development of the future generation. Therefore, it is necessary to further strengthen the attention and support given to teachers in creating an effective education system. Through this process, society can raise strong, just and progressive generations. The above ideas create a comprehensive picture of the teacher's views and duty not only on teaching, but also on life. If you are interested in modern trends in the field of pedagogy or examples of teachers' daily experiences, we can predict future trends and successful pedagogical methods.
