

The Role of Sports in The Field of Cybersports, Drone and Robotic Technologies in Ensuring Public Safety

Mansur Mirkomilovich Magrubov

Employee of the Ministry of Internal Affairs of the Republic of Uzbekistan

Received: 31 December 2025; **Accepted:** 23 January 2026; **Published:** 28 February 2026

Abstract: In the developing technological age, not only are sports competitions organized by humans, but also sports competitions involving robots and drones are developing rapidly. This, in turn, requires the development of legal frameworks for the organization of these competitions in the future.

Keywords: Cybersport, robotics, drones, public safety, Armed Forces, innovative sport, cybersport clubs, interactive tutorials, artificial intelligence.

Introduction: In our country, all conditions have been created and provided for attracting and engaging young people in the field of technology in the future. Especially in the current era of rapid development of information technologies, the issue of studying these technologies and providing qualified personnel in the field remains relevant in our country.

If ten years ago, innovations were made in the field of technology throughout the year, now we can say that innovations are being created every week or every day. Of course, this is gratifying. However, it is natural to ask how to arouse interest among young people in technologies that alleviate human problems.

It is no secret that various computer games have developed among our youth, most of which are racing, universal martial arts, and armed conflicts. Of course, while one side points out the negative aspects of playing these games, the other side claims that these games increase children's thinking skills and imagination.

The opinions expressed by both sides are correct, but we need to see the positive aspects of each area, not just its negative ones.

The International (Dota 2), League of Legends World Championship (LoL Worlds), CS Major Championships (Counter-Strike: Global Offensive), Fortnite World Cup, Overwatch League (OWL), PUBG Global Championship (PlayerUnknown's Battlegrounds), Call of Duty League

(CDL), etc. The prestigious eSports competitions are a confirmation of our positive statements above.

At the same time, the Drone Racing League (DRL), MultiGP Drone Racing (MultiGP), FAI Drone Racing World Championship, Drone Champions League (DCL) and other such prestigious and interesting sports competitions, and the increasing number of fans and participants who want to participate every year, indicate that this sport is rapidly becoming popular.

Our country is also carrying out extensive work to train qualified personnel in the field of technology and to attract young people interested in this field on a large scale.

Our esteemed President constantly emphasizes that today's youth are the successors of our great ancestors and emphasizes that we must constantly study and learn in order to become their worthy successors.

The resolution of our esteemed President dated March 3, 2026 "On measures to develop sports in the field of cybersports, drone and robotic technologies in the Armed Forces of the Republic of Uzbekistan" It would not be an exaggeration to say that the Resolution No. 75 of the President of the Republic of Uzbekistan is the initial cornerstone for the development of these sports.

The main purpose of this resolution is to create a system for the development and popularization of modern sports in the field of cybersports, drone and robotic technologies in the Armed Forces of our

country, to identify, select talented military personnel and help them realize their abilities through systematic holding of competitions and tournaments, to direct them to professional cybersports, to train potential personnel for the information technology sector and to further expand their involvement in the industry.

Of course, these resolutions of the head of our state serve the development of these sports in our country and to train qualified personnel in this field. Most importantly, this resolution is currently the only regulatory legal act in our country on the organization of competitions of this type.

Although these decisions of the head of our state are aimed more at military personnel, it is not surprising that this cornerstone is gradually intended to cover the youth of our country.

At the same time, I think it would be appropriate to organize such competitions in the system of the Ministry of Internal Affairs of the Republic of Uzbekistan, which is in constant direct communication with the people and serves them.

In particular, the organization of cybersports clubs or drone clubs and the holding of competitions in the system of the Ministry of Internal Affairs will arouse interest in this area among young people in the localities.

The organization of sports competitions of this type first requires the development of regulatory legal acts that establish clear rules for their holding.

At the same time, the holding and popularization of these sports are expected to solve some of the following problems in the future.

First. To attract young people to this area and achieve a reduction in crime among young people by effectively spending their free time.

Secondly. Identifying and attracting talented young people to the field.

Thirdly. Reducing the shortage or shortage of personnel in this field and creating a personnel reserve.

Fourthly. Preventing threats to public safety that may be committed by drones in the future. After all, learning the procedures and rules for operating drones by young people can prevent administrative and criminal offenses related to this in the future.

Of course, we all know that this field will not develop overnight. However, it is natural that the foundation laid by the head of our state in this field will bear fruit in the future. After all, as the head of our state said: "We must not forget that the modernization of the military education and personnel training system is the main condition for forming a new image of the army".

It is in the hands of our youth to guard our country's borders and build its future.
